Using Your Headphones

The ear cups are marked "L" and "R"; when worn properly the headphone cable will be on your left side. The two ear cups may be adjusted up or down for most comfortable fit.

Connect the headphone plug to the headphone jack of your music player. Be sure that the plug is fully inserted into the jack. If the plug is not fully inserted you may only hear sound from one side of the headphones.

To protect your hearing, always start listening with the Volume Control of your music player or game player set to a low level and gradually increase the volume to a comfortable listening level.

Note: You may have to adjust the volume control on your music player as well as the In-Line Volume Control on your headphones to find the most satisfactory sound level. If one control is set too low and the other is set too high, the sound may be distorted. Try setting the volume control on your music player halfway between the Min and Max settings, and then use the In-Line Volume Control on your headphones to make final adjustments.

IMPORTANT! Listening at high volume for long periods of time can result in long-term hearing damage. For your safety, do not use headphones if they would prevent you from hearing warning sounds, such as while driving a car or motorcycle, riding a bike, etc. Remember that noise isolation type earphones such as these are very effective in blocking outside noise, including warning sounds. Always be aware of your surroundings and do not use these earphones in situations that require you to hear warning sounds.
